

CHEMISTRY FACULTY LABORATORY SAFETY CONTRACT CENTRAL CAMPUS

Potential hazards exist in all chemical laboratories and some can cause serious accidents. Fortunately, most accidents can be prevented if each person in the lab observes a set of common sense precautions and uses proper experimental procedures. The following rules are to be observed at all times.

Please read the following carefully and be sure that you understand the contents completely prior to filling in the information and signing.

Student Lab Safety Contracts

Students must fill in the information, sign, and return the Chemistry Student Lab Safety Contract to you on the first day of lab. No student is permitted to be or work in the lab if you do not have a contract on file for them. You must retain these contracts for liability. Please store them in a safe place, not in the lab.

The Chemistry Student Laboratory Safety contract may also be found on our website, <http://browardcentralscience.org> under the **Laboratory Info** section.

Lab Safety Video

The Lab Safety Video (instructions on how to use the Audio/Visual equipment is in the A/V cabinet) is shown to students in all chemistry laboratory courses. If the students miss the video, "Starting with Safety", they may see it in Learning Resources on the second floor of Building 17.

Protective Clothing and Dress

All faculty and students must wear safety goggles, gloves, and lab coat at ALL TIMES when in the Chemistry Labs. Wear sensible clothing in the laboratory. Long hair must be pulled back and only closed-toe shoes are allowed.

Personal Safety Equipment

- A.** Goggles must meet **ANSI Z87.1-1989 standards** for chemical splash and impact resistance. *Safety glasses are prohibited.*
- B.** You must wear **gloves** at all times in the laboratory.
- C.** You must wear a **lab coat**. Aprons are located in each chemistry laboratory, if desired.
- D.** You must wear **closed-toe shoes** at all times. Leather shoes are suggested for best protection.

Never Allow Students to Work Alone

No laboratory work may be carried out without the supervision or authorization of an instructor. Absolutely no unauthorized experiments are to be performed. Students are never to work in the laboratory alone. All experiments are to be performed as written in the lab manual or handout or as modified by the instructor.

Students are never to be left alone in the laboratories. You are legally liable for your students' safety at all times.

Handling Chemicals and Equipment

SDSs are located in the **Right-To-Know Compliance Centers** in Room 257 (Prep Room) and are located online at <http://browardcentralscience.org/sds.html> or under Physical Sciences, click Safety Information and then click SDS Information.

Never put anything in your mouth in the laboratory. No eating, drinking, gum chewing, candy, or smoking permitted in the laboratory.

Flammable solvents such as ether, acetone, toluene, alcohols, etc., must be kept well away from open flames.

All chemicals should be handled with care using goggles and gloves and be considered toxic, corrosive, flammable and/or pungent unless informed otherwise. Read all labels carefully.

Use only what is needed. Never pour unused reagent back into the reagent bottles.

Return chemicals immediately to their proper places. **Replace lids on all containers immediately after use.** Leaving containers open increases everyone's exposure to the substances within them. Spills are also more likely when a container is open. In addition, some reagents can be ruined by excessive exposure to air.

No chemical container must be found in the lab without the chemical name on it. Contact the Laboratory Manager if containers are missing labels or improperly labeled.

Keep all chemical containers covered to prevent contamination of the laboratory with fumes.

Never heat a closed container.

The chemical fume hoods are to be used for mixing of all chemicals that produce either toxic or irritating gaseous substances that may be easily inhaled.

Make certain the sash is lowered to a safe level, as shown on the side of the hood. The vertical glass panels on the fume hoods should never be opened, they do not provide any protection from splashes or fumes.

Clean up any spills you create. If you are uncertain as to how a spill should be cleaned, seek information from the Laboratory Staff and/or SDS.

Use only equipment that is in good condition. Report broken or malfunctioning equipment (Meltemps, hot plates, etc) to the Laboratory Manager. Please provide the room number and equipment number. Do not use broken glassware; replace it.

Do not force glass tubing (or thermometers) into rubber stoppers, do not force tubing onto flasks or other equipment, etc.; lubricate the glass with glycerine. Protect your hands with towels when inserting glass into a stopper or use the tool in the instructor's drawer in each lab. Handle all glassware and equipment properly and according to safety regulations to avoid cuts and burns. Never struggle with the equipment or allow students to struggle with the equipment.

Waste

You may dispose of dilute acids with plenty of water in the sinks in the laboratories and sinks in the fume hoods. All other **chemicals should be disposed of in labeled waste containers only**, located in the waste fume hood or on the front counter. Never put any chemical waste in the trash, down the drain, or in any container not labeled as waste. Check with the Laboratory Manager or SDS for proper disposal information.

Waste containers are housed in the Chemistry Prep Room (257) in the Hazardous Waste flammable cabinet. If you notice a waste container missing, please notify Laboratory Staff immediately.

Working Cleanly and Efficiently

Students should never begin any chemical preparation without reading the complete procedure first.

Make sure students keep aisles and work areas clear and drawers and cabinets closed.

Make sure students keep their laboratory bench and all other working areas clean at all times and free of items not related to the procedure.

When finished, students should clean their glassware and put everything away. All materials should be put back and their work area cleaned of debris.

All labels must be removed from all glassware including tubes, beakers, flasks, etc. when the students are done with them.

Place all broken glassware in the appropriately labeled red broken glass bins.

Tighten the lids on all jars and bottles of chemicals. Do not leave any container open to the air.

Balance Use and Cleanliness

Balances must be kept clean. Do not put any chemicals directly on the balance pans. Clean up all spills immediately. Close all containers tightly, and clean up the surrounding area.

Gas Jet Procedure

Using the key provided, turn the gas on to the room. When lighting the burner, open up flow valve on burner, turn on gas, use striker to light the burner. When shutting off, turn the burner off first then turn the gas jet to the off position by turning clockwise all the way. Turn off the gas (burner and jet) immediately after finishing with it.

Using the key provided, turn the gas off to the room as soon as all of the students are done. Check this shut off and **ALL** gas jets before you leave the lab.

Emergency Operation and Safety Features in Laboratories

Campus Safety (Day: x6626 or Night: 9-954-474-8786) and/or calling 911

Emergency Procedures

In case of a minor spill or fire, punch in the red buttons on the Emergency Utility Shut Off and the Emergency Exhaust Fan and proceed with clean up. If this is an emergency, follow the above procedure and evacuate the building. Please see **Accidents** for more emergency and spill information.

A: Emergency Utility Shut Off – use only in event of emergency

This shut off controls the gas, water, and electric to the lab.

This control must be turned on for everything to function in the room.

The only reason to turn this control off is in an *emergency situation*, otherwise, this control is to be left on at all times. When this control has been turned off and turned on again, the alarms on the fume hoods will sound. This is normal and only means the fume hoods are resetting and beginning operation.

Operation

To shut down everything in the room, punch in the red button.

To turn everything back on in the room, use your safety key to turn it to the "on" position.

B: Instructor Gas Shut Off – use daily only when needed

This controls the gas to the lab. This needs to be turned off every time your lab is finished. This is only to be left on when the students require the use of gas for their experiments. If there is no gas when this switch has been turned on, make sure the *Emergency Utility Shut Off* is on. The gas will not function if that control switch has been turned off.

Operation

To turn the gas on or off, use the safety key.

C: Emergency Exhaust Fan – use only in event of emergency

This fan is only to be used *for emergencies*, it is not to be used for daily ventilation of the lab.

Operation

Punch in the red button to turn the exhaust fan on.

Pull out the red button to turn the exhaust off.

Gas and Electrical Problems

Gas Problems: Check to make sure the Emergency Utility Shut Off and Instructor Gas Shut off are **ON**, if there is still no gas, contact Campus Safety to report it is off. Make sure gas lines are off in all rooms. Campus Safety will then reset the main gas line.

Electrical Problems:

First: check that the Emergency Utility Shut Off is **on**. *Second:* check the GFC's on the counters and student stations. Press in the RESET button. If that does not fix the problem, call Campus Safety to report loss of electricity.

Accidents

Report any accident or injury by contacting: Campus Safety and/or calling 911 in the event of a serious accident or injury.

Check and memorize the location of the fire extinguisher, safety shower, eye wash station, Bloodborne Pathogen Response (PPE) kits and spill equipment. Be prepared and know how to use this equipment in case of an emergency. Learn and memorize the locations of the building exits and evacuation routes.

Each laboratory has an eyewash station to be used if a chemical has come in contact with your eyes. Just place your face between the two fountains and press the lever to activate the water. Try to keep your eyes open as best you can, as this flushes them much more effectively.

To use the safety shower, disrobe, and pull the shower handle down. The shower is useful for a person on fire as well as chemical contact.

In case of fire, alert the Manager and/or instructors in chemistry labs immediately and exit the laboratory in an orderly fashion, if required to do so. Never attempt to extinguish a fire by yourself.

Other

The Ice Machine is located in Room 257 (Prep Room) towards the west end of the room.

Students must refill their Deionized Water squeeze bottles from the carboys on the student reagent shelf at the end of the lab.

Put things back where you found them. This includes reagents, aprons, special equipment and anything non-disposable.

Dispose of broken glass, used pipettes, and capillaries in the red broken glass containers beside the front counter.

Keep all Prep Room, Storage Room, and Lab Room doors locked and closed. This protects the students and is necessary for proper air handling and ventilation. No students are ever permitted in the Storage or Prep Rooms at any time.

As a matter of routine, **always wash your hands** thoroughly before leaving the lab. Arms and face may require washing if chemical contact is made with these surfaces.

If you are unsure of any of the above procedures, discuss this matter with the Laboratory Manager.

Any student not complying with the above regulations will be asked to leave the lab. Any faculty will be reported to the Associate Dean.

For more information, view the books and materials in the **Safety Library** in Room 257. You will also find a copy of BC's Chemical Hygiene Plan (complying with OSHA's Chemical Hazard Communication Regulation), OSHA's bulletins, OSHA's PPE booklet, Central Science Lab Hurricane Preparation Plan, BC Central's Emergency Operations Plan Incident Management, and BC's Science Lab Safety Manual in the

compliance center wall rack outside of the Chemical Storage Room. The SDS's are located in the Right-To-Know Compliance Centers in accordance with Florida's Right-To-Know Law. [Please do not remove any of these important information sources from the **Safety Library or Compliance Centers.**]

You may also view any of this information on our website: <http://browardcentralscience.org> under the **Laboratory Info** section.

I have read the above and agree to uphold these procedures. I have had training in the **Florida Right-to-Know Law** and will apply this information during performance of my job duties. I must continue to receive training annually as required by law. I understand that failure to comply with any of the procedures above will be reported directly to the Associate Dean.
